# Annual Drinking Water Quality Report

<pre>iled water) include rivers, lakes, streams, ls, reservoirs, springs, and wells. As water rels over the surface of the land or through the und, it dissolves naturally-occurring minerals in some cases, radioactive material, and can up substances resulting from the presence of als or from human activity. caminants that may be present in source water ude: Microbial contaminants, such as viruses and eeria, which may come from sewage treatment uts, septic systems, agricultural livestock actions, and wildlife. Inorganic contaminants, such as salts and</pre>	amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791. In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

urban storm water runoff, industrial or	Some people may be more vulnerable to contaminants in drinking water than the general population.
estic wastewater discharges, oil and gas Nuction, mining, or farming. Pesticides and herbicides, which may come from a ety of sources such as agriculture, urban storm or runoff and residential uses	Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about
<ul> <li>Organic chemical contaminants, including synthetic and volatile organic chemicals, which ar by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.</li> </ul>	drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).
	If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We cannot control the variety of materials used in
	we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.
luc Peter Or Cheoro Ra In Ra	, which can be naturally-occurring or result rban storm water runoff, industrial or ic wastewater discharges, oil and gas tion, mining, or farming. sticides and herbicides, which may come from a y of sources such as agriculture, urban storm runoff, and residential uses. ganic chemical contaminants, including tic and volatile organic chemicals, which are ducts of industrial processes and petroleum tion, and can also come from gas stations, storm water runoff, and septic systems. dioactive contaminants, which can be lly-occurring or be the result of oil and gas tion and mining activities.

### Source Water Information

Source Water Name	Type of Water	Report Status	Location
WELL 1 (11618)	GW	Active	101 E. 8th Street
WELL 2 (11619)	GW	Active	120 W. 7th Street

#### Source Water Assessment

Source of Water: PECATONICABased on information obtained in a Well Site Survey published in 1989 by the Illinois EPA, several potential sources are located within 1,000 feet of the well. The Illinois EPA has determined that the Pecatonica Community Water Supply's source water is not susceptible to contamination. This determination is based on a number of criteria including; monitoring conducted at the well; monitoring conducted at the entry point to the distribution system; and available hydro geologic data on the well.

#### 2023 Regulated Contaminants Detected

## Lead and Copper

Definitions:

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.

Action Level.	The concentration of a	contaminant which if excee	aded triggers treatment or of	her requirements which a water	avatem must follow
ACCION DEVEL:	The concentracton of a	concaminanc whitch, it excee	cueu, criggers creatment or ot.	mer requiremence whitch a water	ayatem muat IOIIOw.

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	07/07/2022	1.3	1.3	0.11	0	mqq		Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Lead	07/07/2022	0	15	8.9	0	dđđ		Corrosion of household plumbing systems; Erosion of natural deposits.

### Water Quality Test Results

Definitions:	The following tables contain scientific terms and measures, some of which may require explanation.
Avg:	Regulatory compliance with some MCLs are based on running annual average of monthly samples.
Level 1 Assessment:	A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.
Level 2 Assessment:	A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.
Maximum Contaminant Level or MCL:	The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
Maximum Contaminant Level Goal or MCLG	: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
Maximum residual disinfectant level or MRDL:	The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
Maximum residual disinfectant level goal or MRDLG:	The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
na:	not applicable.
mrem:	millirems per year (a measure of radiation absorbed by the body)
ppb:	micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.

### Water Quality Test Results

ppm:	milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.
Treatment Technique or TT:	A required process intended to reduce the level of a contaminant in drinking water.

#### Regulated Contaminants

Disinfectants and	Collection	-	Range of Levels	MCLG	MCL	Units	Violation	Likely Source of Contamination
Disinfection By- Products	Date	Detected	Detected					
Chlorine	2023	0.7	0.6 - 0.8	MRDLG = 4	MRDL = 4	ppm	N	Water additive used to control microbes.
Haloacetic Acids (HAA5)	2023	2	1.77 - 1.77	No goal for the total	60	ppb	N	By-product of drinking water disinfection.
Total Trihalomethanes (TTHM)	2023	9	8.82 - 8.82	No goal for the total	80	ppb	N	By-product of drinking water disinfection.
Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Arsenic	02/04/2021	1.6	0 - 1.6	0	10	ddd	N	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes.
Barium	02/04/2021	0.24	0.22 - 0.24	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Fluoride	02/04/2021	0.701	0.578 - 0.701	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Iron	02/04/2021	0.21	0.075 - 0.21		1.0	ppm	N	This contaminant is not currently regulated by the USEPA. However, the state regulates. Erosion of natural deposits.
Manganese	02/04/2021	16	1.3 - 16	150	150	ppb	N	This contaminant is not currently regulated by the USEPA. However, the state regulates. Erosion of natural deposits.
Nitrate [measured as Nitrogen]	2023	2	0 - 1.6	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Selenium	02/04/2021	2.5	2 - 2.5	50	50	ppb	N	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines.
Sodium	02/04/2021	8.2	3.1 - 8.2			dqq	N	Erosion from naturally occuring deposits. Used in water softener regeneration.
Zinc	02/04/2021	0.054	0 - 0.054	5	5	ppm	N	This contaminant is not currently regulated by the USEPA. However, the state regulates. Naturally occurring; discharge from metal
Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination

Gross alpha excluding radon and uranium	10/01/2020	4.57	4.57 - 4.57	0	15	pCi/L	N	Erosion of natural deposits.
